

Edgeboard

Highly Sustainable

Made from 100% recycled materials and are fully recyclable

Innovative Design

Lightweight construction provides superior strength properties with less material

Application Versatility

Resistance to humidity and moisture enables use for a wide variety of products and environments

Reliable Performance

Protects products throughout the transportation cycle

Edgeboard

Edge protection

Edgeboard, a blend of recycled paper and plastic, helps prevent product damage that can occur during shipping and handling. With an innovative design unique to the industry, it provides exceptional strength, enabling customers to reduce their packaging requirements without sacrificing performance.

Features and benefits

■ Reduces costs

With an innovative design that ensures strength and durability, Edgeboard is manufactured with a thinner gauge than conventional paper products to help decrease material costs. In addition, it enables more pieces per pallet to reduce freight and storage costs.

■ Product versatility

Edgeboard is moisture-resistant, making it ideal for perishable applications, outdoor conditions or where humidity or condensation occurs. It easily accepts nails, staples and screws when product stability must be enhanced with ancillary components.

■ Application-specific solutions

Edgeboard can be tailored to suit different product applications, including custom printing, allowing branding, product identification and point-of-sale merchandising.
